

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

Claim 1 (Currently amended): A ~~eable-fixed~~ retractable horn cleat device comprising:

a seat body having a receiving cavity formed therein;

a ~~movable~~ retractable handle longitudinally mounted in the seat body and ~~eapable-of-sliding~~ adapted to slide up and down ~~on~~ in the seat body between a retracted configuration and an unretracted configuration;

at least two ~~elastic~~ biasing components slidingly disposed in ~~the-sliding~~ a longitudinal direction between the ~~movable~~ retractable handle and the seat body;

a driving plate ~~sited~~ seated in the receiving cavity; with a longitudinal track ~~being~~ disposed thereon ~~on-the-driving-plate~~, said track comprising a substantially V-shaped positioning section upwardly and a substantially V-shaped guiding section downwardly disposed, each having an angled edge, wherein the substantially V-shaped positioning and guiding sections are respectively positioned at two side opposing sides of the track so that the ~~tips~~ angled edges of the two V-shaped sections are respectively oriented toward ~~the~~ an interior of the

longitudinal track and are disposed at an oblique and eccentric position ~~of the~~
~~central line of the longitudinal track~~ relative to a longitudinal axis thereof; and

a coupling member with ~~one~~ a first side fixedly fastened connected to a
cross-bar that is connected to the ~~movable~~ retractable handle, and ~~the other~~ an
opposing second side disposed in the longitudinal track of the driving plate so as
to permit that making the coupling member ~~move~~ to be moved along the track to
from the retracted configuration at the V-shaped positioning section where the
coupling member is obliquely angled, to the unretracted configuration at the upper
positioning section of the track, by a user to be wedged by pressing the ~~movable~~
retractable handle and thereby causing making the coupling member to rotatingly
and slidingly move along ~~the~~ a rear aspect of the track ~~and to~~ the V-shaped
guiding section where the coupling member is caused to rotate to a longitudinal
orientation that permits the coupling member to move upward by an action of the
two biasing components, thereby for moving upward with the retractable handle to
the unretracted configuration in which said ~~further drive the movable retractable~~
~~handle do actions of going back and standing~~ protrudes out of the seat body and
assumes a form of a conventional horn cleat.

Claim 2 (Currently amended): The retractable horn cleat device as claimed in
claim 1, wherein said ~~movable~~ retractable handle comprises a transverse rod and

two vertical rods connected thereto below said transverse rod, ~~said movable handle~~
~~utilizing~~ said two vertical rods of said retractable handle ~~to connect~~ are
connectedly seated on said ~~elastic~~ two biasing components so as ~~to be~~ that said
each of said two biasing components is disposed in said seat body in ~~the~~ a
longitudinal sliding direction.

Claim 3 (Currently amended): The cable fixed device as claimed in claim 2,
wherein a pair of vertical holes corresponding to said two vertical rods are
~~disposed on~~ longitudinally formed through said seat body to ~~let~~ permit said ~~elastic~~
two biasing components to be located seated co-axial with ~~in~~ said vertical holes
and ~~react~~ to connect to ~~with~~ said two vertical rods in the longitudinal sliding
direction in said seat body.

Claim 4 (Currently amended): The cable fixed device as claimed in claim 2,
wherein a groove is disposed at a top of said seat body corresponding to a position
exactly below said transverse rod of said ~~movable~~ retractable handle and adapted
to receive and ~~hide~~ substantially conceal said transverse rod.

Claim 5 (Currently amended): The cable fixed device as claimed in claim 2,
wherein ~~a fixing rod~~ said cross-bar is transversely connected ~~between~~ to each of

said two vertical rods, and the coupling member is connected to the ~~fixing rod~~
cross-bar.

Claim 6 (Currently amended): The cable fixed device as claimed in claim 5,
wherein the ~~fixing rod~~ cross-bar is surrounded with a block through which said
cross-bar extends , and the coupling member is connected to the block.

Claim 7 (Currently amended): The cable fixed device as claimed in claim 6,
wherein a ~~fillister~~ recess is provided at the inside top of the receiving cavity
corresponding to the block so as that ~~the bulging an~~ upper part of the ~~square~~ block
is contained in the ~~fillister~~ recess while the ~~fixing rod~~ cross-bar moves upward and
makes contact with ~~the a~~ top of the receiving cavity.

Claim 8 (Currently amended): The cable fixed device as claimed in claim 1,
wherein the ~~elastic~~ two biasing components are a pair of springs.
